Workshop on Data Analytics for Business & Audit with Power BI

Dear Member,

WHY THIS SEMINAR?

"In God we trust, all others bring data to the table"

As the business world re-affirms its commitment to data based decision making, tools and techniques of data analytics become all the more important.

Power BI is a Business Intelligence & Data Visualization tool that transforms operational data into insightful information. It does this by enabling business users' aggregate data from various sources, analysing it and creating interactive dashboards and BI reports.

Power BI is a complete suit consisting of a Windows desktop application, an online SaaS (Software as a Service), and mobile Power BI apps. It can be used as personal report and visualization tool, and can also serve as the analytics and decision engine behind group projects, divisions, or entire corporations.

Power BI can be effectively used to harness the power of Business analytics by interpreting large amounts of data to help identify strategic business opportunities as well as to support operational decision making. Power BI can also be effectively used to unleash the power of data analytics from Controls and Audit Perspective.

In this half day workshop, the eminent faculties shall give participants an over view of what is Power BI, it's components and capabilities and the areas where it can be effectively and efficiently used to harness the power of data analytics for Business and Audit decision making.
