Half day seminar on Digital Transformation and GST – Opportunities and Challenges in ERP environment

Dear member,

Digital Transformation with ERP

We stand on the brink of a technological revolution that will fundamentally alter the way we live, work and relate to one another. In its scale, scope and complexity, the transformation will be unlike anything humankind has experienced before. It's an era of technical awakening.

Digital transformation involves managing data on a cloud, Social Media, Networking, Mobility, Analytics to deliver real time financial reporting, with inbuilt Algorithms to enable executives to make nimble decisions and quickly guide them to informed responses in unexpected situations and also to anticipate the future, it's also about future of enterprise application strategy and process innovation, rethinking employee engagement, it's no longer just about procuring one solution and deploying one. It's not one simple software solution anymore.

GST – Goods & Services Tax – Opportunities and Challenges in ERP environment

The Mega Tax Reform, It's an opportunity and a compliance requirement. An opportunity for companies to realign their supply chain which was earlier decided based on Inter-state tax laws and it's also about all companies gearing up to meet the compliance requirements of the Mega Tax reform.

From an IT perspective it's about the GSTN, ASP, GSP and rewiring your ERP systems to ensure capturing of relevant data fields. The changeover to GST presents a huge opportunity for all the members (in practice as well as in the industry), ie assisting in: impact assessment, configuring IT systems, accounting, compliance, etc.

We will discuss these concepts and understand how companies are enabling adoption of technology for GST compliance, supply chain management and process innovation.
