Session on Data, Clouds and Networks – Security Best Practices

Dear Member,

Network security is an operation designed for protecting the integrity and usability of one's network and data. An effective network security deals with access over a network.

A network security solution comprises of standards and approaches adopted to achieve prevention against the data misuse, irrelevant modifications, and other mishaps over the web platform.

In this context, the committee thought it fit there should be a Data, Clouds and Networks – Security best Practices where we can learn from experts who have walked that path.
